PRIVATE AUTOMOTIVE
COLLECTIONS

ACERVO

Brand Strategy & Digital Product Identity

A digital home for exceptional automotive collections.

VERSION 1.0 · NOVEMBER 2026 · ACERVOGROUP.COM

INK ON CELESTE · THE HOUSE, THE RULE, THE CAR

A collection deserves more than storage.

Acervo exists because the records of a serious collection live on paper and in a PowerPoint, and finding one invoice can take weeks. The brand was designed before the first screen, because a collector decides in seconds whether a tool deserves his cars.

PURPOSE

Give every car in a collection a transferable digital passport, and give the collection as a whole the structure its owner already keeps in his head: cars, garages, parts in custody, documents and the history of who changed what.

POSITIONING

Not a fleet tool and not a marketplace. A private platform for exceptional collections, where management is the wedge and private sales are the second act. Mexico first in marketing, global access, by invitation.

BRAND PROMISE

Order, continuity and nothing lost. The product never promises to verify the authenticity of anything; it guarantees procedure. AI proposes, a person decides, and the system records who decided.

AUDIENCE

Private collectors, the managers who run their collections day to day, and the professionals around them: workshops, brokers, customs and transport. The person in the garage, often on a phone and a bad connection.

Discreet

Luxury that does not announce itself. Ink on ivory, one accent colour, no gold leaf.

IN PRACTICE

Private by default. Three visibility states per car; a wishlist that matches without exposing the seller.

Permanent

The passport outlives the owner and the software. Records are designed to be transferred, exported and printed.

IN PRACTICE

One report export per car; an activity log that keeps every change with author and date.

Precise

Numbers, part numbers and dates are first class content, never decoration.

IN PRACTICE

Serif for what the house says, sans for what the system says; tabular data in Manrope at 13 px.

Heritage, not nostalgia

A heraldic griffin and an engraved GT, drawn so they print on paper and render at 16 px.

IN PRACTICE

Engravings are reserved for empty states and the brand; the interface itself stays clean.

Accountable

Trust comes from procedure, not from claims. The brand never sells artificial intelligence; it sells time, order and nothing lost.

IN PRACTICE

Recognition proposes make, model and year; the owner confirms. No identity documents are stored.

STRATEGIC DECISION	WHAT IT RULES OUT	WHERE IT SHOWS IN THE PRODUCT
Management is the wedge	Building sale, auction or import flows before the garage works. Auctions link out to external platforms.	Navigation is built around the car: Coches, Garajes, Piezas, Documentos, Actividad. Market and import sit behind flags.
Procedure over verification	Any copy that promises authenticity. Any AI output that writes to a record on its own.	Every proposal is a confirmation step; every write is logged with who and on what, 1,210 changes in 30 days on the test set.
Restraint as a signal of seriousness	Gold, chrome, car photography as wallpaper, decorative gradients.	Dark canvas, ivory text, one orange rule under the title. Photos belong to the collector's cars, never to the brand.

The visual language of Acervo.

LOGO SYSTEM

FIGMA · ACERVO BRAND, BRANDMARK

ACERVO
PRIVATE AUTOMOTIVE COLLECTIONS

ACERVO
PRIVATE AUTOMOTIVE COLLECTIONS

The emblem is a rampant griffin, guardian of treasure in heraldry, holding a shield with the house initial. Drawn as an ink engraving in a single colour: ink on light surfaces, ivory on dark, never a third colour. The lockup is griffin, double orange rule, wordmark; the sub line reads *Private automotive collections*.

Published variants: griffin, wordmark, horizontal, vertical and horizontal simple, each in light and dark themes at 24, 40 and 64 px. The 24 px griffin is the head in a ring, used as favicon and app icon (16, 32, 48, 180, 192, 512 px, maskable at 56 % with an 80 % safe zone). Social, email header and PWA splash carry only the griffin on the canvas colour, no wordmark.

Not defined: there is no published clear space or minimum size rule beyond the three fixed sizes. The wordmark is live type, not outlines: Cormorant Garamond Regular with 18 % tracking; the sub line is Manrope Medium with 30 % tracking.

ILLUSTRATION IN THE SAME HAND

A classic GT in profile, vectorised in the engraving's stroke. Full engraving for hero and empty states above 480 px, ink silhouette from 200 px for cards and the app. Six empty state engravings exist in the library: vehicle, patio, garage, closed door, parts, documents.

BRAND PALETTE

FIGMA · TOKENS, COLOR PRIMITIVO

INK	MIDNIGHT	IVORY	BONE	CELESTE	ORANGE 24H	CHAMPAGNE
#1C2B43	#0F1A2B	#F6F3EC	#ECE6D9	#BFD3DE	#E07A2E	#B8975A
Text, primary, brand surface	Primary hover, scrim	Text on ink, accent surface	Secondary surface	Chrome, header, info bg	Accent: rule, stripe, active tab	Brand only; not a UI token

Orange is the only action signal and it is used as a line, never as a fill: the double rule under titles, the active tab, the brand stripe. In the product, buttons are ink (**#1C2B43**) in light mode and ink light (**#4368A0**) in dark mode; destructive is a clean red (**#B42318**). Status and feedback come from a separate functional set, warm and desaturated for ivory: success **#396F4B**, warning **#825D1C**, error **#B42318**, info **#3F668D**, process **#7053A2**, with their own dark values.

The product canvas is not pure ivory: light mode runs on **#FBFAF6** with white cards; dark mode on **#111316** with **#17191D** cards and **#ECECEA** text. 67 primitives, 61 semantic tokens with light and dark modes.

TYPOGRAPHY

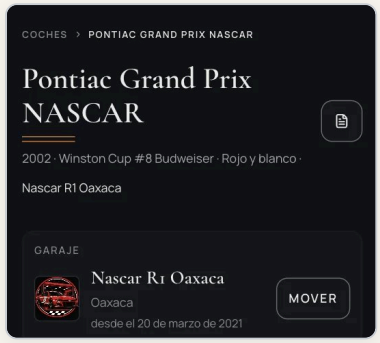

FIGMA · TOKENS, 20 TEXT STYLES

DISPLAY · 48 / 110 %	Ferrari 296 GTS	Cormorant 600
HEADING/2 · 24 / 120 %	Estadísticas de la colección	Cormorant 600
BODY/MD · 15 / 155 %	2002 · Winston Cup #8 Budweiser · Rojo y blanco	Manrope 400
LABEL/BUTTON · 13 / 12 %	EXPORTAR INFORME	Manrope 600
LABEL/META · 11 / 12 %	GARAJE · DESDE EL 20 DE MARZO DE 2021	Manrope 500
DATA/NUMERAL · 40 / −2 %	1,210	Manrope 600

The one rule: a high contrast serif for the house and its titles, never below 24 px (the 17 px body/serif and 20 px heading/3 are the recorded exceptions, used for garage names and tile values). A neutral humanist sans for body, data and interface, never above 18 px. The split makes hierarchy legible without colour: if it is set in Cormorant, the house is speaking; if in Manrope, the system is.

A brand that behaves like the product.

Five principles connect the identity to the interface. Each one is a constraint the design system enforces, with a real screen from production as evidence.

Clarity over decoration

MEANING

The only ornaments are the griffin and the double rule. Everything else is type, spacing and the collector's own photographs.

IN THE INTERFACE

No gradients, no illustrative icons, no colour used for mood. One accent, and only as a line.

EXAMPLE

Passport header: serif title, orange rule, metadata in sans. Nothing else competes with the car's name.

Structure before complexity

MEANING

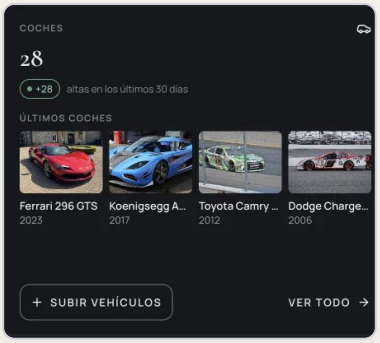

A collection is cars, garages, parts, documents and the record of what happened. The model is fixed before any feature is added.

IN THE INTERFACE

Navigation mirrors the data model and is centred on the car; every other entity is reached as a relation of it.

EXAMPLE

Sidebar: Colección (Resumen, Coches, Garajes, Piezas, Documentos) and Gestión (Actividad), with live counts.

Information deserves hierarchy

MEANING

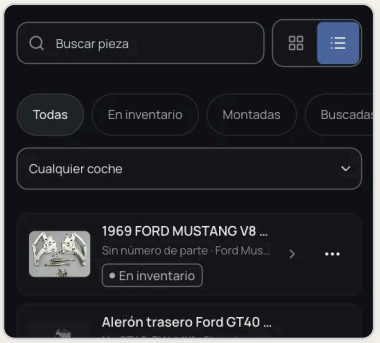

What the house says and what the system says are different voices, and the reader should never have to guess which is which.

IN THE INTERFACE

Cormorant for names and headline numbers; Manrope for labels, data and controls; uppercase meta labels at 11 px with 12 % tracking.

EXAMPLE

Summary tile: COCHES label, serif 28, a status chip, then the last four cars as a row of thumbnails.

Precision without friction

MEANING

The person using Acervo is standing in a garage with one hand free. Precision must not cost taps.

IN THE INTERFACE

Mobile first, 44 px minimum targets (56 px for garage actions), search before filters, a floating add button on every list.

EXAMPLE

Parts list: search, grid or list toggle, filter chips, one select. Registering a car with three photos takes 27 s on slow 3G, measured on preview.

Trust through record

MEANING

Acervo guarantees procedure, not facts. The system proposes, a person decides, and the decision is kept with a name and a date.

IN THE INTERFACE

Every write produces an activity entry with who, what and on which car. AI recognition always ends in a confirmation step.

EXAMPLE

Actividad: 1,210 changes in 30 days on the test collection, filterable by period, person and car, exportable.

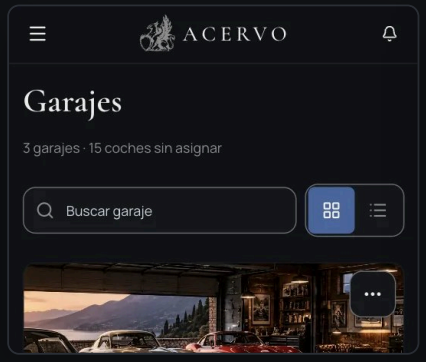

From identity to interface.

Resumen · collection dashboard, production, November 2026. Serif for the collection name and the headline count; sans for everything the system says; orange only on the active tab and the selected item marker.

Passport · garage, documents, parts, history

Garajes · photo cards, 56 px actions

Piezas · status chips from the functional set

Typography

Two voices, one rule. Coleccion Inigo Angulo and 28 are set in Cormorant; 28 coches · 3 garajes · 37 piezas in Manrope. Section labels are uppercase meta at 11 px. The serif never drops below 24 px except for garage names and tile values.

Colour

Dark canvas #111316, cards #17191D, text #ECECEA. Primary actions use ink light #4368A0 so they read on night surfaces without becoming a second brand colour. Orange appears exactly twice on this screen.

Spacing and radius

A 4 px scale (4, 8, 12, 16, 24, 32, 48, 64) and four radii (4, 6, 12, 24). Cards sit on 12 px, chips and the floating button on full. Desktop keeps a fixed 236 px side navigation; content stays inside a 16 px gutter on mobile.

Layout

Mobile first, then widened: the same components render the Resumen as a two column grid on desktop and as a stack on a phone. The side navigation collapses to a drawer; the inner tabs move under the header.

Interaction

Three durations (120, 200, 300 ms) and three curves. Feedback is immediate on navigation; status chips come from the functional set (success, warning, error, info, process), never from brand colours. Every destructive action has its own red and a confirmation.

Evidence

These are captures of the deployed application on the author's 28 car test collection, not mockups. The first family collection, over 100 cars, is being loaded behind it.

Consistency at every level.

TOKEN COLLECTIONS

FIGMA · TOKENS, READ NOVEMBER 2026

COLLECTION	CONTENTS	RULE IT ENFORCES
Color primitivo	67 raw values: core (ink, midnight, ivory, bone, canvas), sky, orange, status, a 16 step night scale.	Never used directly in screens. Only semantic tokens reach a component.
Color semántico	61 tokens, modes Claro and Oscuro: `surface/*`, `text/*`, `primary/*`, `accent/default`, `border/*`, `focus/ring`, `chart/sector-1…6`, `logo/grifo`, `engraving/default`.	Dark mode is a mode switch, not a redesign. The griffin and engravings have their own tokens.
Color funcional	Neutral, info, success, warning, process, error: bg, border and text per mode.	Status is never expressed with brand colours. Chips, alerts and rows read from this set only.
Tipografía	Two families, sizes 10 to 70, four weights, line heights 100 to 155 %, tracking caps 12 % and wordmark 20 %. 20 text styles.	Serif ≥ 24 px for the house; sans ≤ 18 px for the system.
Espaciado	`space/1…16` on a 4 px base; `size/touch/min` 44, `size/touch/garage` 56; borders 1 and 2.	Touch targets are a token, so accessibility is a build constraint.
Radios	sm 4, md 6, lg 12, xl 24, full.	Cards lg, controls md, chips and FAB full.
Elevación	card (0 2 8), sheet and floating (0 12 32), colours as ink alpha; three effect styles.	Shadows are ink, never black, so elevation stays on brand on ivory.
Movimiento	fast 120, base 200, slow 300 ms; standard, enter, exit easings.	Motion is a token, so every transition in the app has the same tempo.

MATURITY, STATED HONESTLY

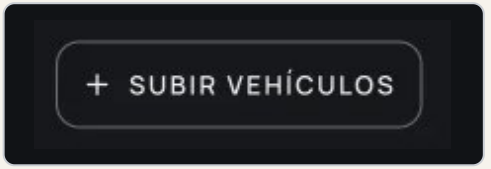

Version 1 library, published from Figma and consumed by the Next.js app through a check that rejects raw colour values (530 files pass). Screens are designed only in Pantallas MVP with library instances; missing pieces are staged as local *TODO custodia/…* components and promoted in a single publication after review. Known open items: the dark palette audit of October 2026 found contrast gaps in elevation and chrome tokens that are logged, not yet resolved; the warning token in Color semántico still aliases brand amber and the functional set is used by convention instead.

COMPONENTS IN PRODUCTION

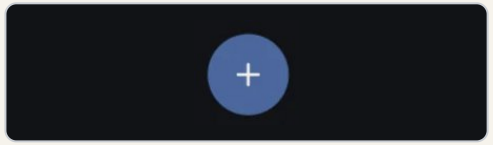

CAPTURES, APP.ACERVOGROUP.COM

Primary · ink light fill, label/button 13 px, 12 % tracking

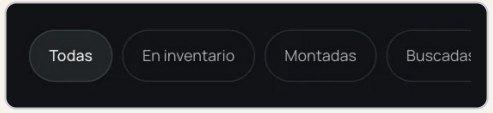

Secondary · outline on surface, same label style

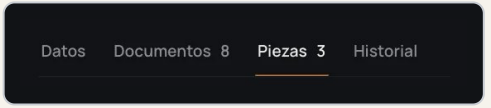

Floating add · radius full, 56 px, one per list

Garage action · *Mover*, 56 px target

Filter chips · selected state uses chrome selected token

Tabs with counts · orange underline is the only accent

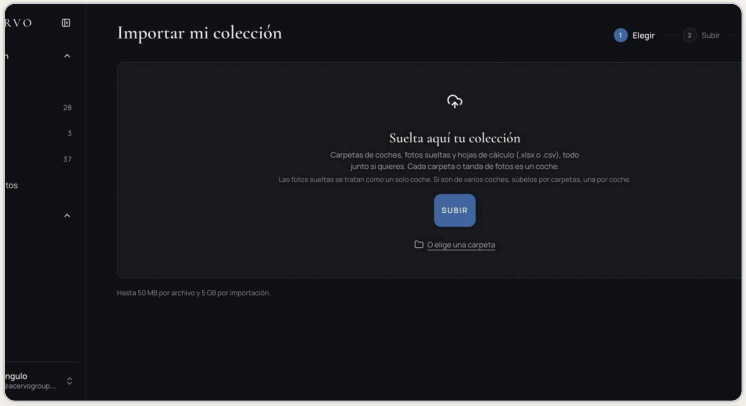

Rows and status chips · success and info from Color funcional

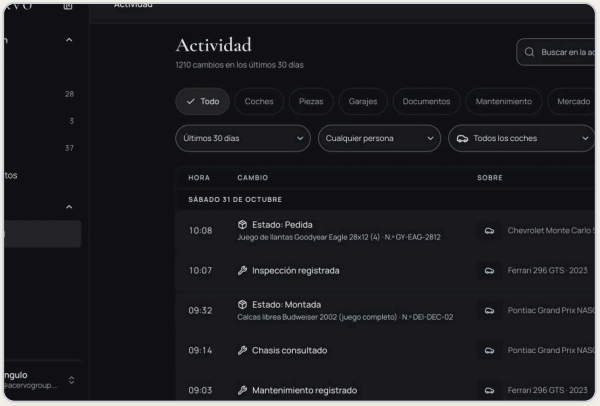

Chart card · sectors from *chart/sector-1…6*, orange as sector 3 in dark mode

Published component families include BrandMark, AppHeader, SideNav, TabBar, VehicleCard, VehicleHero, VehicleIdentity, SummaryTile, TitleRule, PartStatusChip, PartRow, DocumentRow, TimelineRow, Alert, ActionSheet, FieldRow, MemberPicker, PhotoUploadCard, ProposalCard and six engraved illustrations. Figma is the source of truth for design; the repository's *docs/diseno.md* mirrors it.

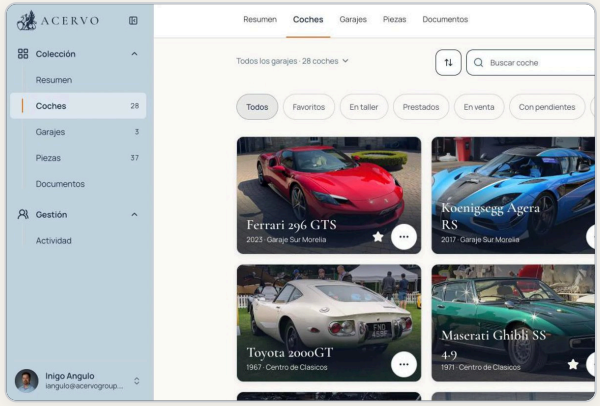

One identity. Every interaction.

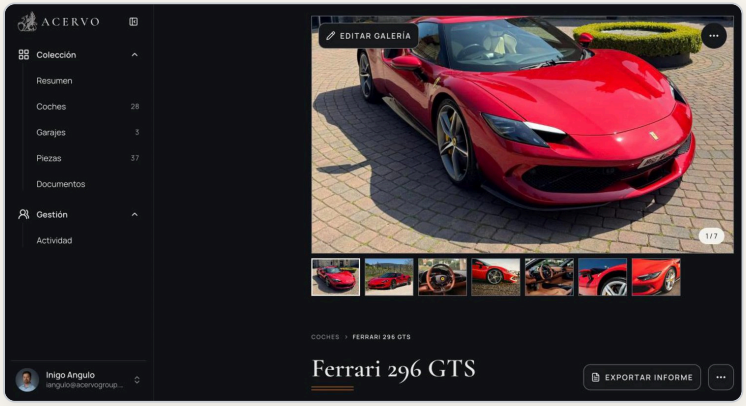

AI assisted intake · *Importar mi colección*: drop folders, photos and spreadsheets, one folder per car. Recognition proposes make, model and years; the owner confirms. The screen is quiet on purpose: one serif title, one instruction, one action.

Record · *Actividad*, filtered by period, person and car, exportable. The same table typography as every list in the app.

Light mode · the brand's canvas and celeste chrome, same components, same tokens switched to the Claro mode.

Document output · *Exportar informe* produces a per car report on the brand's ivory, built from the same tokens as the screen. The passport is designed to leave the software.

Responsive · garages as full width photo cards on a phone, with 56 px actions and the floating add button.

Relations and forms · the garage card inside a passport: meta label, serif name, sans details, one outlined action. Fields follow the same FieldRow pattern across registration, edit and part forms.

Across intake, lists, records, exports and mobile layouts the identity carries the same four signals: the griffin in the header, serif for names, sans for data, and orange as a line. Empty states use the engraved illustrations from the library instead of generic icons. The identity is not a skin over the product: it is what makes a new screen recognisable before its content is read, and it is why a report printed from Acervo looks like it came from the same house as the app.

A living product identity.

CORE IDENTITY PRINCIPLES

- **Ink, ivory and a griffin.** One emblem, one wordmark, one engraving style. Nothing else is brand imagery.
- **Two voices.** Cormorant for what the house says, Manrope for what the system says. The split is the hierarchy.
- **Orange is a line.** The rule, the stripe, the active tab. Never a fill, never a background, never text.
- **Status is functional.** Success, warning, error, info and process come from their own set, in both modes.
- **The object first.** The collector's photographs are the only photography. The brand never supplies cars.

ESSENTIAL CONSISTENCY RULES

- Screens are designed in Pantallas MVP with published library instances; nothing is drawn by hand inside the interface.
- No raw colour values in code. A component consumes a semantic token or it does not ship; the check runs on every build.
- The brand mark is placed only through the BrandMark component: variant, theme and size, never redrawn.
- Every list has search before filters and one floating add action. Every title carries the rule.
- Accessibility is an acceptance criterion: AA contrast, visible focus ring, 44 px targets, 56 px in the garage.

EVOLVING THE IDENTITY

- **New features** (private market, import, maintenance) inherit the car centred model and the existing component families before any new pattern is proposed.
- **Dark mode** is a token mode with known gaps in elevation and chrome; they are resolved in Tokens, not patched per screen.
- **Print and export** reuse the same tokens, so reports, passports and future certificates read as one house.
- **Spanish first** (es-MX) in copy and labels; the brand speaks about time, order and nothing lost, never about artificial intelligence.
- **When in doubt, remove.** A pattern that needs a new colour or a new typeface is a signal that the problem is structural.

BEFORE A NEW SCREEN SHIPS · THE COHERENCE CHECK

1 · Model

Does it hang off the car, a garage, a part or a document? If not, the structure is wrong before the design is.

2 · Components

Built in Pantallas MVP from published instances. Anything local is a *TODO custodia/* candidate, not a precedent.

3 · Voice

Serif only for what the house says, at 24 px or more. Everything the system says is Manrope, 18 px or less.

4 · Colour

Semantic tokens only; status from Color funcional; orange as a line. Verified in both Claro and Oscuro.

5 · Record

Every write logged with who and on what; every AI proposal ends in a confirmation. Tested on an iPhone before PASS.

Built around the things worth preserving.

This document describes the current identity and its implementation as of November 2026, verified against the Figma Tokens and Componentes libraries and captures of the deployed application. It is not an exhaustive corporate identity manual; where a rule is not defined, it says so.
